

VANTAGE VUE® | QUICK SETUP GUIDE

1

Prepare the Sensor Suite: attach wind cups and wind vane; pull tab on battery (or install battery if not included); install debris screen and rain collector tipping spoon assembly.

2

Download the WeatherLink app. If using WeatherLink Live, power it up and use the WeatherLink app to set it up. If using WeatherLink Console, power it up and follow the on-screen prompts to set it up.

3

Verify data transmission from the Sensor Suite to the WeatherLink app or to the Console.

Note: For best reception during this step, WeatherLink Live and/or Console and the Sensor Suite should be at least 10 feet (3 meters) apart. (Initial reception typically takes 1-3 minutes but can take up to 10 minutes depending on specific environmental conditions.)

4

Mount the Sensor Suite to its outside mounting pole.

Please refer to your manuals for detailed instructions. Manuals can be downloaded at www.davisinstruments.com/vv-manual.
