

Thermal imagers for building thermography

See more.
More flexibility.
More security.

See more – more flexibility – more security...

Testo thermal imagers for daily applications in the building industry, offer security and prevent damage!

The Testo thermal imagers save time, energy and money in industrial thermography, ensuring more security allround: Thanks to sharp focus images and the 32° lens, no detail is ever missed. In addition to the intuitive menu, this also guarantees fast and comprehensive analysis of the image data.

Testo thermal imagers discover anomalies and weak spots in buildings quickly and without damage. Whereas with other methods, cable or pipeline systems must be dismantled, with a Testo thermal imager, a single glance is enough.

The presentation of surface moisture for fast localization of mould in buildings is unique in building thermography. Areas with danger of mould growth are immediately presented in the thermal imager via the input of ambient conditions.

Even the smallest temperature differences can be identified with the high temperature resolution of the Testo thermal imagers. With the additional built-in digital camera, a real image is stored in addition to the IR image. This considerably eases documentation.

With the Testo thermal imagers you are hot on the trail of energy loss in building thermography, helping the customer to avoid expensive heating costs!

Testo thermal imagers for building thermography:

- Prevent damage and save money
- Stand out thanks to with high resolution images
- Ensure fast and comprehensive analysis
- Have an intuitive menu structure
- Guarantee a large image section thanks to the 32° lens

Exchangeable lenses

Intuitive menu

Rotatable display

Testo thermal imagers in building thermography

Discover anomalies and weak spots in buildings quickly and without damage.

With the Testo thermal imagers you are hot on the trail of energy loss in building thermography, helping your customers to avoid expensive heating costs!

Detect building faults and ensure building quality

Analysis with a Testo thermal imager is a fast and efficient method of detecting possible construction faults. In addition to this, the Testo thermal imagers are ideally suitable as proof of the quality and the correct implementation of construction measures. Occurrent heat loss, moisture and lack of air-tightness in a building are visible in a thermal image. In addition to this, you detect implementation faults in the heat insulation and discover building damage – without contact!

Locate roof leaks exactly

A further possibility for use is the examination of flat roofs for damp.

Damp areas in the roof construction store the warm from the sun longer than intact areas. For this reason, the roof cools irregularly in the evening. A Testo thermal imager makes use of these temperature differences to show exactly the areas on a roof with enclosed moisture or damaged insulation.

Good image quality

Thermal imager testo 875

Analyze a building shell and carry out comprehensive energy consultation

In building thermography, infrared technology is ideal for the fast and effective analysis of energy losses in the heating or air conditioning of buildings. Thanks to their high temperature resolution, the Testo thermal imagers visualize in detail faulty insulation, cold bridges, building faults and damage. They are ideal for the recording and documentation of energy losses on outer walls and doors, roller blind casings, radiator niches, in roof constructions or the entire building shell. Use the Testo thermal imagers as ideal tools for comprehensive diagnosis and maintenance applications, and whenever energy consultation is required.

Monitoring and checking solar energy systems

There are two main reasons for examining solar energy systems: Safety and performance monitoring.

Solar energy systems reach top performance in full sunshine. Defective cells can lead to an enormous heat development, and thus to the danger of fire. Apart from this, defective cells can cause considerable loss of system performance. With the Testo thermal imagers, potential fire risks and damaged cells can be recognized early. This avoids a loss of performance and guarantees a high level of security of the system.

Exchangeable lenses

Thermal imager testo 881

Thermal imager testo 882

Hot on the trail of a ruptured pipe

If a pipe rupture is suspected, the only solution is often to break open whole walls or floors. With the thermal imagers from Testo, your work minimizes damage and lowers costs. Leakage in underfloor heating and other inaccessible pipes are localized precisely and without damage. You avoid opening walls unnecessarily and the repair costs are considerably lower.

Examining moisture damage

Not every damp wall is caused by a ruptured pipe. Rising damp or penetrating water due to the faulty implementation of rain and drain water flow-off can cause damp walls. Moisture damage can also occur from blocked drains or insufficient seepage. The Testo thermal imagers find the cause of rising damp or precipitation water entry, before the water can cause extensive damage.

Motor focus

Integrated digital camera

Preventing mould growth

Cold bridges are energy wasters. In such places, condensation of humidity from the ambient air can occur. As a result of this, mould growth develops in these places, and with it, the risk to the health of the inhabitants. The Testo thermal imagers provide the data necessary for preventing dangerous mould growth on time, or for minimizing the risk of mould growth even in the hidden corners and niches of a house.

Monitoring heating and installation systems

Thanks to the easy and intuitive operation of the Testo thermal imagers, heating and ventilation/air conditioning systems are tested quickly and securely. A glance with the thermal imager is enough to discover irregular temperature distribution. Silting and blockages in radiators are reliably detected.

Building thermography with testo 876

Thermal imager testo 876

Voice recording

Testing the air-tightness of new buildings

If doors or windows are not correctly installed, in winter cold air can enter and warm indoor air can escape. Draughts, increased ventilation heat loss, and above all, high energy costs, are the result. The combination of thermography and Blower Door has proven its value. In this procedure, a negative pressure is created in the building, so that cool outside air can flow into the building through leaky seals and cracks. The thermal imager makes the detection of the leaks considerably easier. Gaps in the building seal are thus localized before facings and installations make any repair work complicated and costly.

... with the thermal imagers from Testo

testo 875 – the thermal imager for daily use

The thermal imager testo 875 is the reliable, solid tool for your daily use. With a temperature resolution of < 80 mK, exchangeable lenses and an integrated digital camera, you discover weak spots in buildings quickly and securely with the thermal imager testo 875. You localize leakage precisely, and detect defective insulation directly.

For you, that means: You see more and have more reliability when thermographing!

testo 875

...more on page 10

testo 876 – the thermal imager in flexible camcorder design

The thermal imager testo 876 stands out thanks to its large rotatable display. This allows you to keep the display in view when thermographing in any position, securely reaching every corner. Thanks to exchangeable lenses, you can guarantee that you always have the right image section in your display.

For you, that means: You see more and have more flexibility when thermographing!

testo 876

...more on page 14

testo 881 – the thermal imager with the best NETD < 50 mK

The thermal imager testo 881 with the best thermal sensitivity of < 50 mK provides highest image quality. This allows you to measure even the smallest temperature differences, and obtain high resolution IR images at any time. A wide-angle and a telephoto lens allow adaptation to the different sizes and distances of measurement objects.

For you, that means: You see more and discover even more when thermographing!

testo 881

...more on page 18

testo 882 – the thermal imager with 320 x 240 pixels

The thermal imager testo 882 in ergonomic pistol design, with 320 x 240 pixels, stands out thanks to even more precise infrared images. With 76,800 temperature measuring points, it sees every detail on the measured object. This makes it even easier for you to detect anomalies and weaknesses from greater distances.

For you, that means: You see more and have more security when thermographing!

The PC software IRSoft from Testo for comprehensive analysis and professional thermography reports

IRSoft – the high-performance PC software for professional thermography analysis from Testo. The IRSoft allows comprehensive analysis of thermal images on a PC. It stands out thanks to its clear structure and high user-friendliness. All analysis functions are explained using easily comprehensible symbols. So-called tool tips additionally provide explanations of each function by mouseover. This assistance simplifies image processing and allows intuitive operation. A fully functional version of the PC software IRSoft is included with all Testo thermal imagers.

IRSoft – Precise analysis of thermal images

Infrared images can be conveniently processed and analyzed on a PC using the IRSoft. Extensive analysis functions are available for professional image processing. For example, the different emissivities of the various materials for image areas can be corrected afterwards, right up to individual pixels.

The histogram function shows the temperature distribution of an image area. A profile line is used to analyze temperature curves. In order to visualize critical temperatures in an image, limit value violations as well as pixels in specific temperature range can be emphasized. In addition to this, unlimited measurement points can be set, hot/cold spots determined, and comments on the analysis made.

Change of emissivity by area for exact temperature analysis.

Easy creation of professional thermography reports

Infrared and real images are displayed in the screen already during analysis, and automatically taken over into the report. This makes easy and professional documentation of the measurement results possible.

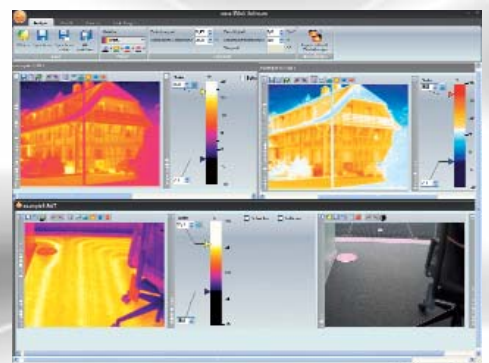

The report assistant guides step by step to a complete and clear report. Different templates are available not only for short and quick reports, but also for more comprehensive documentation. The templates contain all relevant information on measurement site, measurement task and examination results. Especially for the purpose of examining building shells for cold bridges, the IRSoft offers report templates, with which reports compliant with DIN EN 13187 can be created. In addition to this, the report designer can be used to create user-defined templates for individual reports.

Multi-page reports for complete documentation

IRSoft – all important information at a glance

Several infrared images can be opened and analyzed parallel to each other. All analyses in the images are visible at a glance and comparable to each other. Alterations to settings can be carried out either for the whole infrared image or for individual image sections. It is additionally possible to transfer current image corrections to all opened infrared images with a mouse click.

Simultaneous evaluation and comparison of several images

PC software IRSoft – including the analysis function for image overlay: Testo TwinPix

The thermal imagers from Testo with integrated digital camera automatically store an infrared and a real image simultaneously. With the professional image overlay Testo TwinPix, these two images can be superimposed over each other in the PC software IRSoft. The information from the thermal image and the real image are then displayed together in one image.

Straight to the perfect result with Testo TwinPix...

By setting marking points which correspond in the infrared and the real image, the images are overlaid exactly. Even scenes with measurement objects at different distances can be blended without a problem, and shown simultaneously in one image.

See hidden pipelines even in the real image, with TwinPix

Show the customer what's important, with the professional image overlay from Testo...

During the analysis, the image overlay helps orientation in the image and in the exact localization of the damaged area.

Setting the transparency level regulates the intensity of the infrared or the real image component in the overlay. Critical temperature ranges can be marked by inserting infrared limit values and the infrared range. Even in the real image, problem areas can be directly emphasized, and the temperature status of the measurement object displayed plastically. The overlaid image is taken over into the report for documentation purposes.

Function of the PC software: Image overlay TwinPix

testo 875 – the thermal imager for daily use

The thermal imager testo 875 is the reliable, solid tool for your daily use. With a temperature resolution of < 80 mK, exchangeable lenses and an integrated digital camera, you discover weak spots in buildings quickly and securely with the thermal imager testo 875. You localize leakage precisely, and detect defective insulation directly.

For you, that means: You see more and have more reliability when thermographing!

The 7 most important advantages of the **testo 876**

1. Fold-out, rotatable display

Thanks to the fold-out, rotatable display, you have clear view in any position when thermographing

2. High image quality due to NETD < 80 mK

Thanks to a temperature resolution of < 80 mK, even the smallest temperature differences are visible with the testo 876.

3. Exchangeable lenses

A wide-angle and a telephoto lens allow you the adaptation to the very different sizes and distances of measurement objects.

4. Integrated digital camera

With the testo 876, you can store a real image of every measurement site parallel to the infrared image.

5. Motor focus for one-hand operation

With the motor focus, you can focus any infrared image quickly and easily.

6. Voice recording with the practical headset

With the integrated voice recording, you can comment any infrared image directly during the application. This valuable information is stored together with the thermal image.

7. Special measurement mode for detecting areas with danger of mould

By entering the ambient conditions, you can visualize areas in danger of mould growth in the thermal image at a glance.

Detector	160 x 120 pixels	
Thermal sensitivity (NETD)	< 50 mK	
Temperature range	-20 °C to +350 °C	
Image refresh rate	33 Hz*	
Lens 32° x 23°	✓	
Exchangeable telephoto lens 9° x 7°	-	(✓)
High temperature measurement up to 550°C	-	(✓)
Integrated digital camera	✓	
Integrated power LEDs	-	✓
Voice recording using the headset	-	✓
Laser**	✓	
Motor focus	-	✓
Display of surface moisture (via manual input)	-	✓
Isotherm display in instrument	-	✓
Min-/Max on Area calculation	-	✓
Auto Hot/Cold Spot Recognition	✓	

(✓) Optional ✓ Standard

* within the EU, outside 9 Hz ** excepting USA, China and Japan

The imager is delivered in a robust case incl. pro software, SD card, USB cable, mains unit, and Li ion rechargeable battery.

Order suitable accessories in a case:

	Order no.	t881-1	t881-2	t881-2 set
Exchangeable telephoto lens 9° x 7°	A1		(✓)	✓
Germanium lens protection glass	C1	(✓)	✓	✓

Set testo 881-2

In addition to the equipment of the testo 881, the set also includes:

- Telephoto lens 9° x 7°
- Lens protection glass
- Additional battery
- Fast battery charger
- Soft case

Part no.: 0563 0881 V6

Save now, with the
testo 881-2 in a set

Accessories **testo 881**

	Order no.
Fast battery charger. Desktop charging station for two rechargeable batteries for the optimization of the charging time	0554 8801
Additional battery. Additional Lithium ion rechargeable battery for extending the operating time	0554 8802
Lens protection glass. Special Germanium protective glass for optimum protection of the lens from dust and scratching	0554 8805
Retrofit telephoto lens (testo 881-2 only). Please contact our customer service	-
Retrofit high temperature measurement (testo 881-2 only). Please contact our customer service	-
Sun Shield. Special sun shield for the display of the thermal imager in bright surroundings	0554 8806

	Order no.
Soft case. Practical carrying option for the thermal imager incl. carrying strap	0554 8814
Aluminium tripod. Professional, extremely light and stable aluminium tripod with Quick-Release legs and 3-way tripod head	0554 8804
Emissivity adhesive tape. Adhesive tape e. g. for shiny surfaces (roll, L.: 10 m, W.: 25 mm), ε=0.95, temperature-proof up to +250 °C.	0554 0051
Car charging adapter. Practical charging option for the thermal imager when travelling by car – can be used anywhere	0554 8817
ISO calibration certificates	
Calibration points at 0 °C, 25 °C, 50 °C	0520 0489
Calibration points at 0 °C, 100 °C, 200 °C	0520 0490
Freely selectable calibration points in the range -18 °C to 250 °C	0520 0495

testo 882 – the thermal imager with 320 x 240 pixels

The thermal imager testo 882 in ergonomic pistol design, with 320 x 240 pixels, stands out thanks to even more precise infra-red images. With 76,800 temperature measuring points, it sees every detail on the measured object. This makes it even easier for you to detect anomalies and weaknesses from greater distances, and you work even more quickly.

For you, that means: You see more and have more security when thermographing!

The 7 most important advantages of the **testo 882**

1. Image sensor with 320 x 240 pixels

With 76,000 temperature measurement points, you detect measurement objects clearly and precisely. This ensures that no damage escapes you, even at greater distances.

2. Large field of view thanks to 32° lens

With the 32° standard lens, you immediately record large image sections, and provide a full overview of the temperature distribution of the measurement object.

3. High image quality due to NETD < 60 mK

Thanks to a temperature resolution of < 60 mK, even the smallest temperature differences are visible with the testo 882.

4. Voice recording with the practical headset

With the integrated voice recording, you can comment any infrared image directly during the application. This valuable information is stored together with the thermal image.

5. Built-in digital camera with power LEDs

In addition to the infrared recording, you store a parallel real image of the measurement site with the testo 882. The power LEDs guarantee you optimum illumination of dark areas when recording real images.

6. Special measurement mode for detecting areas with danger of mould

By entering the ambient conditions, you can visualize areas in danger of mould growth in the thermal image at a glance.

7. Isotherm display in instrument

The optical colour alarm shows up critical temperature areas easily and directly in the thermal imager's display.

Technical data of the thermal imager **testo 882**

Product data	testo 882
Image output	
Infrared	
Detector type	FPA 320 x 240 pixels, a.Si
Thermal sensitivity (NETD)	< 60 mK at 30 °C
Field of view / min. focusing distance	32° x 23° / 0.2 m
	1.7 mrad
Geometric resolution (IFOV)	33 Hz for EU, otherwise 9 Hz
Image refresh rate	Focus manual and motor focus
Spectral range	8 to 14 µm
Visual	
Image size / min. focusing distance	640 x 480 pixels / 0.4 m
Image presentation	
Image display	3.5" LCD with 320 x 240 pixels
Display options	IR image only / real image only/ IR and real image
Video output	USB 2.0
Colour palettes	9 options: iron, rainbow, cold-hot, blue-red, grey, inverted grey, sepia, Testo, iron HT
Measurement	
Temperature range	-20 °C to 100 °C / 0 ° to +350 °C (switchable)
High temperature measurement (optional)	+350 °C to +550 °C
Accuracy	±2 °C, ±2% of m.v. (-20 °C to +350 °C) / ±3% of m.v. (+350 °C to +550 °C)
Emissivity / reflected temperature compensation	0.01 to 1 / manual
Imager equipment	
Digital camera	✓
Power LEDs	✓
Motor focus	✓
Standard lens(32°x23°)	✓
Laser measuring spot marking	✓ (laser classification 635 nm, Class 2)
Voice recording	✓
Display of surface moisture distribution	yes using manual input
Measuring functions	
Measurement	standard measurement (1-point) / two-point measurement
Hot/Cold Spot Recognition	✓
Isotherms	✓
Min-/Max on Area	✓
Image storage	
File format	.bmt; export options in .bmp, .jpg, .png, .csv, .xls
Storage device	SD card 2 GB (approx. 1,000 images)
Power supply	
Battery type	fast-charging, Li-ion battery can be changed on-site
Operating time	approx. 4 hours
Charging options	in instrument or optionally in charger, with car charging adapter
Mains operation	yes
Ambient conditions	
Operating temperature range	-15 °C to 40 °C
Storage temperature range	-30 °C to 60 °C
Air humidity	20% to 80% non-condensing
Housing protection class	IP 54
Vibration (IEC 68-2-6)	2G
Physical features	
Weight	approx. 900 g
Dimensions (L x W x H) in mm	152 x 108 x 262
Tripod mounting	yes, with adapter
Housing	ABS
PC software	
System requirements	Windows XP (Service Pack 2), Windows Vista, Windows 7, interface USB 2.0
Standards, tests, warranty	
EU Directive	2004 / 108 / EC
Warranty	2 years

Your practical benefit

The detector size indicates the number of temperature measurement points with which the thermal imager is equipped. The more pixels, the more detailed and clearer are the measurement objects presented.

The NETD displays the smallest temperature difference which can be resolved by the imager. A low NETD guarantees the resolution of the smallest temperature differences. The rule of thumb is: the smaller this value is, the better is the measurement resolution.

The temperature range of your thermal imager informs you, up to which temperature your imager is able to record and measure the heat radiation of objects.

The display refresh rate informs as to how frequently the thermal imager is refreshed per second.

The 32° lens records a large image section, creating an ideal overview of the temperature distribution of a measurement object – there is more in the image at a glance.

The exchangeable telephoto lens assists in the measurement of smaller details and visualizes them even at greater distances in your thermal image.

Thanks to the rotatable display, you can thermograph with assurance from any position. Undesired reflections on the display are now avoided.

With the high temperature option, the measuring range can be flexibly extended. Thanks to a high temperature filter, the measurement of temperatures up to 550 °C is possible.

The coldest and the hottest spot of your measurement object are automatically marked in the thermal image in the imager display – critical heat spots are detected at a glance.

The minimum and maximum values of an image section can be determined directly on site and at a glance.

The optical colour alarm localizes critical areas easily and directly in the thermal image. All points whose temperature values are within a pre-defined range, are marked in colour.

Via the manual input of ambient temperature, air humidity and dewpoint, mould risk spots are visualized in the thermal image at a glance.

Localized weak spots can be easily commented using voice recording. You thus document valuable additional information directly on site.

Faster and easier object inspection thanks to the display of infrared and real image. The digital photo is automatically stored in addition to every infrared image.

The power LEDs guarantee you optimum illumination of dark areas when recording real images.

The dynamic motor focus allows you to focus the infrared image with one hand.

The perfect support for orientation as to which part of the object is being measured.
